Process

The validity of measures depends on how they are built. By examining the key building blocks of a measure, you can assess its validity for your purpose. For more information, visit the [Measure Validity](#) page.

SECONDARY MEASURE DOMAIN

Does not apply to this measure

Brief Abstract

DESCRIPTION

This measure is used to determine the percentage of healthcare professionals who affirm that in their unit or area prescriptions are always ordered revising all the medication being taken by the patient.

The following survey question may be added to the "Safety Culture" survey instrument:

- "Before a new prescription is ordered, the list of medication being taken by the patient is revised."

Possible replies: never / almost never / sometimes / almost always / always

RATIONALE

Changes in medications that occur during one care setting are often not communicated to healthcare providers in other care settings or service units. As a result, professionals often lack important information when making treatment decisions. This lack of information is a frequent cause of medication prescribing errors.

Main aim of indicator: to enhance patient safety by increasing the percentage of cases in which prescriptions are ordered revising all the medication being taken by the patient.

PRIMARY CLINICAL COMPONENT

New prescriptions; revised patient medication list

DENOMINATOR DESCRIPTION

Total number of healthcare professionals responding to the following item in the "Safety Culture" survey:

- "Before a new prescription is ordered, the list of medication being taken by the patient is revised."

Possible replies: never / almost never / sometimes / almost always / always

NUMERATOR DESCRIPTION

Respondents indicating "always" x 100

Evidence Supporting the Measure

EVIDENCE SUPPORTING THE CRITERION OF QUALITY

- A formal consensus procedure involving experts in relevant clinical, methodological, and organizational sciences
- A systematic review of the clinical literature
- One or more research studies published in a National Library of Medicine (NLM) indexed, peer-reviewed journal

Evidence Supporting Need for the Measure

NEED FOR THE MEASURE

Overall poor quality for the performance measured
Variation in quality for the performance measured

EVIDENCE SUPPORTING NEED FOR THE MEASURE

Ministerio de Sanidad y Consumo. Indicadores de buenas practicas sobre seguridad del paciente. Resultados de su medicion en una muestra de hospitales

del sistema nacional de salud Español. Madrid: Ministerio de Sanidad y Consumo; 2008. 95 p.

CASE FINDING

Users of care only

DESCRIPTION OF CASE FINDING

Total number of healthcare professionals responding to the following item in the "Safety Culture" survey:

- "Before a new prescription is ordered, the list of medication being taken by the patient is revised."

Possible replies: never / almost never / sometimes / almost always / always

DENOMINATOR SAMPLING FRAME

Patients associated with provider

DENOMINATOR INCLUSIONS/EXCLUSIONS

Inclusions

Total number of healthcare professionals responding to the following item in the "Safety Culture" survey:

- "Before a new prescription is ordered, the list of medication being taken by the patient is revised."

Possible replies: never / almost never / sometimes / almost always / always

Exclusions

None

RELATIONSHIP OF DENOMINATOR TO NUMERATOR

All cases in the denominator are equally eligible to appear in the numerator

DENOMINATOR (INDEX) EVENT

Therapeutic Intervention

DENOMINATOR TIME WINDOW

Time window is a single point in time

NUMERATOR INCLUSIONS/EXCLUSIONS

Inclusions

Respondents indicating "always" x 100

Exclusions

None

MEASURE RESULTS UNDER CONTROL OF HEALTH CARE PROFESSIONALS, ORGANIZATIONS AND/OR POLICYMAKERS

The measure results are somewhat or substantially under the control of the health care professionals, organizations and/or policymakers to whom the measure applies.

NUMERATOR TIME WINDOW

Encounter or point in time

DATA SOURCE

Rate

INTERPRETATION OF SCORE

Better quality is associated with a higher score

ALLOWANCE FOR PATIENT FACTORS

Unspecified

STANDARD OF COMPARISON

Internal time comparison

Evaluation of Measure Properties**EXTENT OF MEASURE TESTING**

After pilot testing, the set of indicators has been measured in a random sample of 25 Spanish hospitals, stratified by hospital size. The main objective has been to field test the feasibility of measurement in the various settings representing real life situations in the context of the Spanish Health Care System.

Both the whole indicators validation report and the results of the baseline measurement in a sample of the Spanish National Health Service (NHS) hospitals may be accessed and downloaded from the Spanish Ministry of Health web page (in Spanish):
